

Measure Up! Project Guide

Name _____

My Tasks

To learn about measurement, first draw three objects on the computer using a digital drawing program. Measure the objects using the stamp option found in the program.

My Worksheets to Complete

___ What's My Length?

Project Option

Choose objects to draw that are found in a national park. After you draw the objects on the computer, measure each object using the stamp feature on the digital drawing program. Choose one stamp (such as a square or a circle stamp) and use it as a unit of measure by stamping the length of the object you drew, the way you used objects in the classroom as units of measure.
