

# Trying Taxonomy

Name \_\_\_\_\_

**Taxonomist:** A scientist who identifies and classifies organisms. The work of a taxonomist can help to save a species from extinction! If a taxonomist finds a new species, he or she is allowed to name it.

**Directions:** Using available resources, complete the chart to classify twelve examples of flora and fauna found at the national parks. Include the properties of the organisms and the parks where they're found. Summarize your most interesting finding in the summary section.

Flora or Fauna	Location	Properties	Classification	Kingdom	Source
